Los miembros de Junta de la Entidad Coordinadora actualmente que dirige los trabajos del Puerto Rico & Virgins Islands Volunteer Frequency Coordination, Inc

Presidente

Sr. Julio Díaz Santiago (KP3JD)

Email: juliod112@hotmail.com

Custodio de los Récords

Sr. Iván Valentín (KP3IV)

Email: kp3iv.ivan@gmail.com

Los miembros de la junta estamos a la mejor disposición de ayudar a los trustee y a toda la comunidad radioaficionada en relación a los repetidores de Puerto Rico e Islas Vírgenes.

Coordinador: Área Norte

Sr. Ramón E. Ramos Medina (KP4DH)

Email: kp4dh01@gmail.com

Coordinador: Área Oeste

Sr. Iván Feliu (WP4CPV)

Email: iafeliu@gmail.com

Coordinador: Área Sur

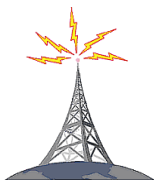

Sr. Juan Sepúlveda (KP3CR)

Email: kp3cr@yahoo.com

Coordinador: Área Este

Sr. Héctor Meléndez (KP4FGL)

¿Qué es un repetidor?

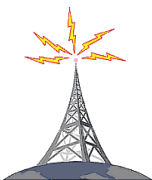

Un repetidor de radioaficionados es un equipo electrónico que recibe señales de radio, usualmente débiles, y las retransmite en una potencia más alta de manera que las mismas cubran más largas distancias sin degradación. Muchos repetidores están localizados en montañas o edificios altos debido a que la altitud aumenta el alcance de sus señales. Existe una gran mayoría de repetidores fabricados por radioaficionados que disfrutan la experimentación y fabricación de equipos. Los repetidores de radioaficionados son mantenidos por radioaficionados o por clubes de radioaficionados. Una gran parte de los dueños de estos repetidores permiten que sus equipos sean usados por otros radioaficionados libre de costo alguno, siempre y cuando lo hagan cumpliendo con las reglas federales y los requisitos que impongan sus dueños. Este es el único caso en que las reglas proveen para que el dueño de un repetidor pueda escoger quien usa o no usa su repetidor. En algunas áreas, múltiples repetidores son enlazados para formar una red capaz de cubrir áreas extensas.

Terminología básica para repetidores de radioaficionados:

- **Frecuencia de entrada – Input frequency:** Esta es la frecuencia en la cual el repetidor recibe señales – la frecuencia en la que su equipo debe transmitir para tener acceso al repetidor.
- **Frecuencia de salida – Output frequency:** Esta es la frecuencia en la que el repetidor transmite – es la frecuencia en la que usted debe escuchar.
- **Compensación – Offset:** El “offset” o compensación del repetidor es la diferencia entre la frecuencia de entrada y la de salida. Un repetidor que transmite en 154.700 y recibe en 145.100 MHz tiene un “offset” de $145.700 - 145.100 = -600$ kHz.

Tabla de offset de las diferentes frecuencias:

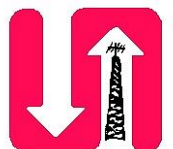

Banda de radioaficionado	Offset que se utiliza en Puerto Rico	Observación
10 metros	Menos 100 kHz o - 100 KHz	La FCC le ha dado a cada dueño o “trustee” de un repetidor el DERECHO a escoger quien usa su repetidor y quién no. [Parte 97.205(e)]
6 metros	Menos 1,500 kHz o - 1,500 KHz	
2 metros 145 y 146 MHz	Menos 600 MHz o – 600 MHz	
2 metros 147 MHz	Más 600 MHz o + 600 MHz	
1.25 metros (220)	Menos 1,600 MHz o - 1,600 MHz	
70 CM 440	Más 5,000 MHz o + 5,000 MHz	
70 CM 446-447-448 y 449	Menos 5,000 MHz o – 5,000 MHz	
33 CM 902-928	-12 MHz or -25 MHz	
23 CM 1240-1300	-12 MHz or -20 MHz
